

NHS Health Call Vital Signs Monitoring

Robust, easy to use monitoring of vital signs

The NHS Health Call vital signs service enables a patient to record vital signs from home, whilst being monitored by a healthcare professional. The service reduces the need for patients to travel to routine appointments, alleviating pressures on healthcare staff.

Using a self-monitoring device, a vital sign such as blood pressure can be measured by the patient. On each day the patient is due to take their reading,

they receive an automated phone call at a pre-agreed time. The patient is asked questions around their general health and well-being and to record their reading.

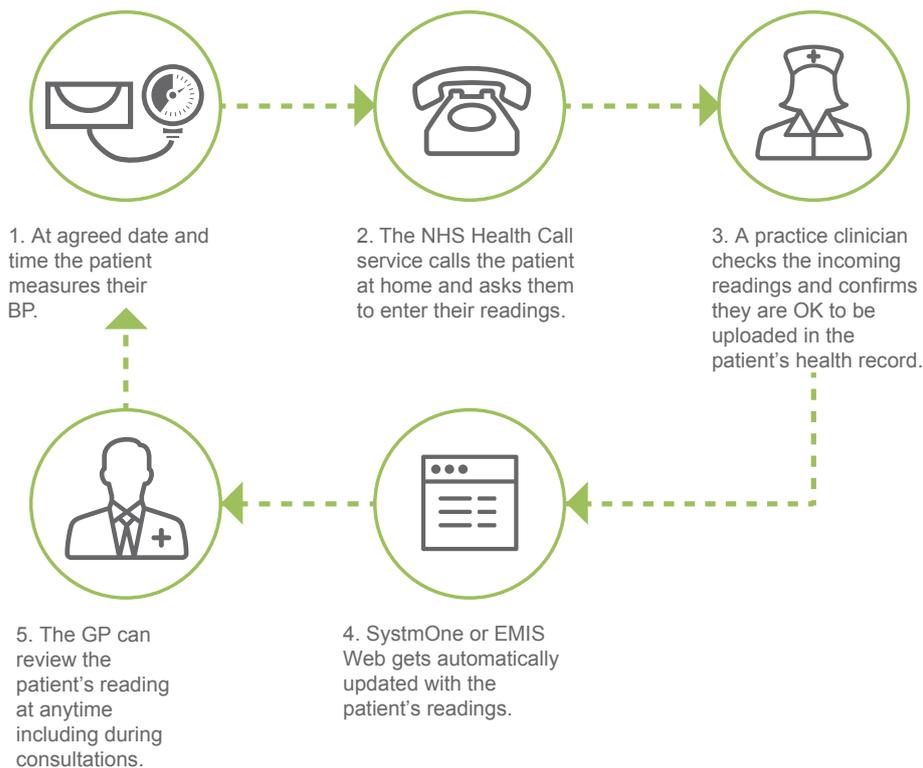

Unlike any other digital health provider, our technology enables patient data to flow straight into the GP system so GPs have full access to the progress of each and every patient.

Patient benefits

- ⇒ Reduces the need for patients to travel to appointments
- ⇒ Patients can self-test in the comfort and convenience of their own home
- ⇒ The technology is quick and simple to use
- ⇒ Enables the patient to further understand their condition
- ⇒ GPs are alerted immediately to any irregular readings
- ⇒ Patient data is kept safe and secure inside the NHS network
- ⇒ GPs have instant access to all patient readings so they can make more informed decisions

Clinical benefits

- ⇒ Patients feel better cared and supported
- ⇒ Patient data links straight into the patient record system
- ⇒ Instant access to data means better decisions can be made around each patient
- ⇒ Reduces travel costs and staff time
- ⇒ Increases staff capacity by reducing the number of appointments
- ⇒ Improved monitoring reduces hospital appointments as intervention can happen sooner
- ⇒ Solutions can be made bespoke for every organisation

Patient data flows straight into GP and clinical systems

All our solutions integrate into the unique digital health platform from Inhealthcare. The platform connects to N3 hosted clinical applications including the Spine, EMIS Web and SystemOne. This integration enables patient readings from healthcare applications to flow straight into a patient record without any intervention.

Enabling healthcare professionals instant access to patient data has taken telehealth to the next level. With patient readings able to flow into clinical records, better decisions can be made by clinicians and GPs which are underpinned by accurate and up-to-date patient data.

Our technology is hosted with the N3 network, so you can be assured all patient data is securely safeguarded.

About NHS Health Call

NHS Healthcall is a joint partnership between County Durham and Darlington NHS Foundation Trust and Inhealthcare Limited. We bring together experts from healthcare, underpinned by 20 years' experience in technology. We offer a suite of innovative, patient and clinician friendly digital applications designed to transform patient care whilst driving substantial efficiency and cost savings for the NHS.
